Introduction

These release notes accompany **mocha Track for Quantel V2.0.1**, which is a maintenance release of our tracking import plug-in for Quantel generationQ systems. The bugs fixed are listed below in Fixed Issues; features introduced with the previous major version are also listed in the New Features in 2.0.0 section.

Tutorial videos demonstrating how to use **mocha** and **mocha Track for Quantel** can be found at:

<http://www.imagineersystems.com/support/mocha/tutorials/>

New Features in 2.0.0

This release includes several new improvements:

- Compatibility with version 4.2 host software
- Drag-and-drop input of XML files
- The plug-in is now available free of charge

Fixed Issues

Issue:	DE613: User interface layout problems
Description:	Some of the user interface controls were not laid out as expected, and the version field was truncated.
Issue:	DE614: Tracker corners did not match DVE
Description:	The ordering of the four tracker corners did not match the expected order in the DVE corner pinning function, resulting in a distorted image when corner pinning.

Hardware Requirements

A system capable of running V4.2 Quantel software.

Software Requirements

Any Quantel generationQ V4.2 system such as eQ, iQ or Qeffects, running on a Quantel-approved operating system.

Compatible Imagineer Products

mocha Track for Quantel can import tracking data from several Imagineer products: **mocha Pro**, **mocha**, **motor**, **monet** and **mokey**. It is not compatible with **mocha for After Effects** or **mocha for Final Cut**.

Installation

Windows

1. Once the installation file, Mocha Track For QuantelV2.0.1-xxxx.msi, has been downloaded onto the system, double click the file to begin installation.
2. Follow the instructions on screen.
